### What is 5G?

SINCE 1916

- ‘5G’ is the fifth generation of cellular mobile communications systems.
  - Previous generations: 4G (LTE/WiMax), 3G (UMTS/CDMA), and 2G (GSM)
- 5G performance is expected to be technically superior to all previous generations in terms of
  - achievable data throughput
  - latency
  - system capacity
  - reliability
  - device density
  - mobility
  - energy efficiency
  - [costs]
- 5G is standardised in 3GPP.
  - The first 5G specifications are included in Release15
- Many on-going tests and trials, first commercial deployments expected soon.

12

## Minimum performance requirements

ITU-R Report M.2400

SINCE 1916

Technical parameter	Target value
Peak data rate	Uplink: 10 Gbit/s Downlink: 20 Gbit/s
User experience data rate	Uplink: 50 Mbit/s Downlink: 100 Mbit/s
User plane latency	For eMBB: 4 ms For URLLC: 1 ms
Control plane latency	20 ms
Connection density	1 000 000 devices per km <sup>2</sup>
Area traffic capacity	Downlink: 10 Mbit/s/m <sup>2</sup>
Reliability	1-10 <sup>-5</sup>
Mobility	up to 500 km/h

## What 5G is about

THE NEXT CENTURY

© 2018 by the Society of Motion Picture & Television Engineers®, Inc. (SMPTE®)

## How can 5G support many diverse use cases at the same time?

SINCE 1916

### The issue

- Different industrial sectors have specific but very diverse technical, operational, commercial, and regulatory requirements
- Traditionally, these requirements would be met by dedicated (purpose-built) networks, or dedicated components in the telecom networks.
- If all targeted use cases must be supported by the same telecommunications infrastructure at the same time, the traditional approach is inefficient and, ultimately, not viable.

### 5G solution

- A flexible network architecture based on the principles of software defined networking (SDN) and network functions virtualisation (NFV)
- This type of architecture allows a creation of logical (virtual) networks
- Each logical network can be configured to meet a specific set of requirements.
- Multiple logical networks can be deployed on the same physical network.
- Such logical networks are called '**network slices**'.

THE NEXT CENTURY

© 2018 by the Society of Motion Picture & Television Engineers®, Inc. (SMPTE®)

19

## 5G network 'slicing'

SINCE 1916

### Deutsche Telekom

*Technically speaking, "the network" will no longer exist.*

*Instead, there will be a number of virtual networks, operated in parallel, based on a shared physical infrastructure.*

*The advantage: these networks – called "slices" – can have widely different, and even contradictory, properties. Each slice is designed to meet the specific requirements of a particular use case.*

*Network slicing enables network operators to make the infrastructure – or parts of it – application-specific and available on demand, as a separate network with specific properties, such as a guaranteed data capacity or latency.*

<https://www.telekom.com/en/company/details/network-slicing-485776>

THE NEXT CENTURY

© 2018 by the Society of Motion Picture & Television Engineers®, Inc. (SMPTE®)

20

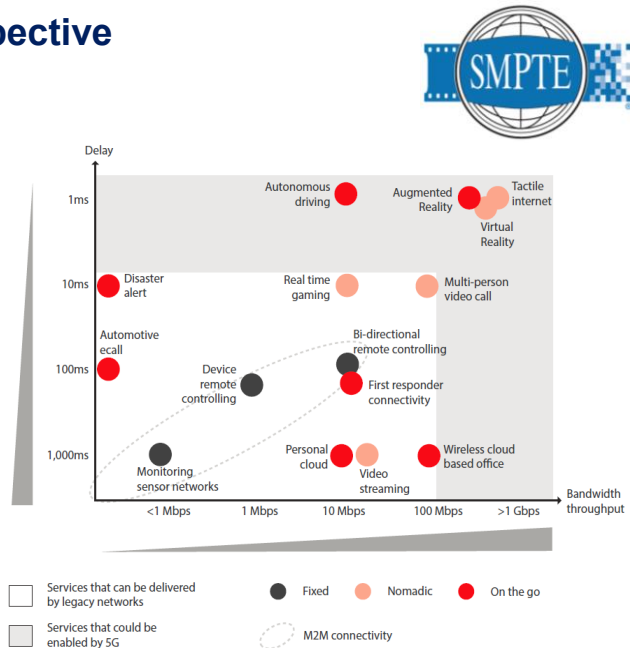

## Mobile network operators' perspective

### GSMA:

*As with each preceding generation, the rate of adoption of 5G and the ability of operators to monetise it will be a direct function of the new and unique use cases it unlocks.*

*Thus the key questions around 5G for operators are essentially:*

- What could users do on a network which meets the 5G requirements that is not currently possible on an already existing network?*
- How could these potential services be profitable?*

THE NEXT CENTURY

## Motivation for media companies to consider the adoption of 5G

### New capabilities

- New formats
  - UHD-HDR-HFR,
  - VR, AR, 360 deg
  - Immersive Audio
- All-IP workflows
- Automated production
- New types of service
- Extended reach
  - personal devices
  - vehicles
  - particular audiences
- ...

### Increased efficiency

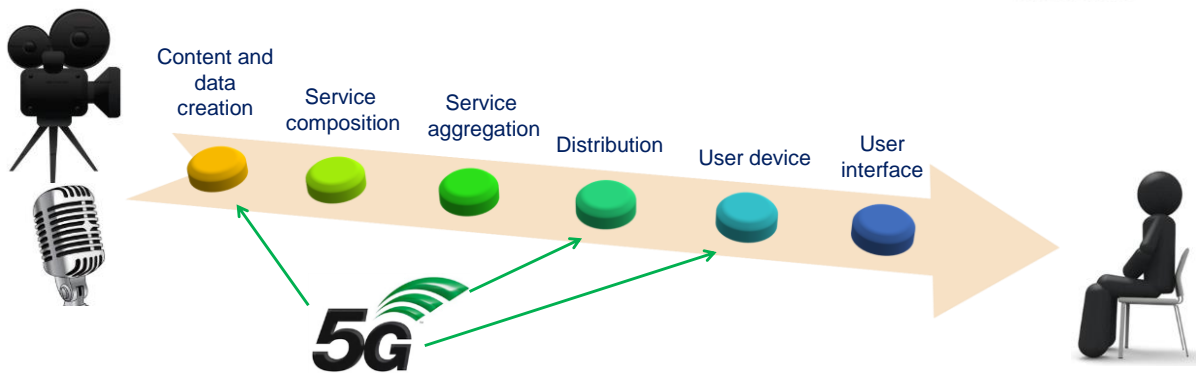

- Operational flexibility
  - Remote production
  - Short set-up time
- Reduced costs
- Reduced complexity
  - No wires
  - Less processing needed
  - Less equipment needed
- ...

THE NEXT CENTURY

25

## 5G in content production

THE NEXT CENTURY

© 2018 by the Society of Motion Picture & Television Engineers®, Inc. (SMPTE®)

## Motivation to use 5G in content production

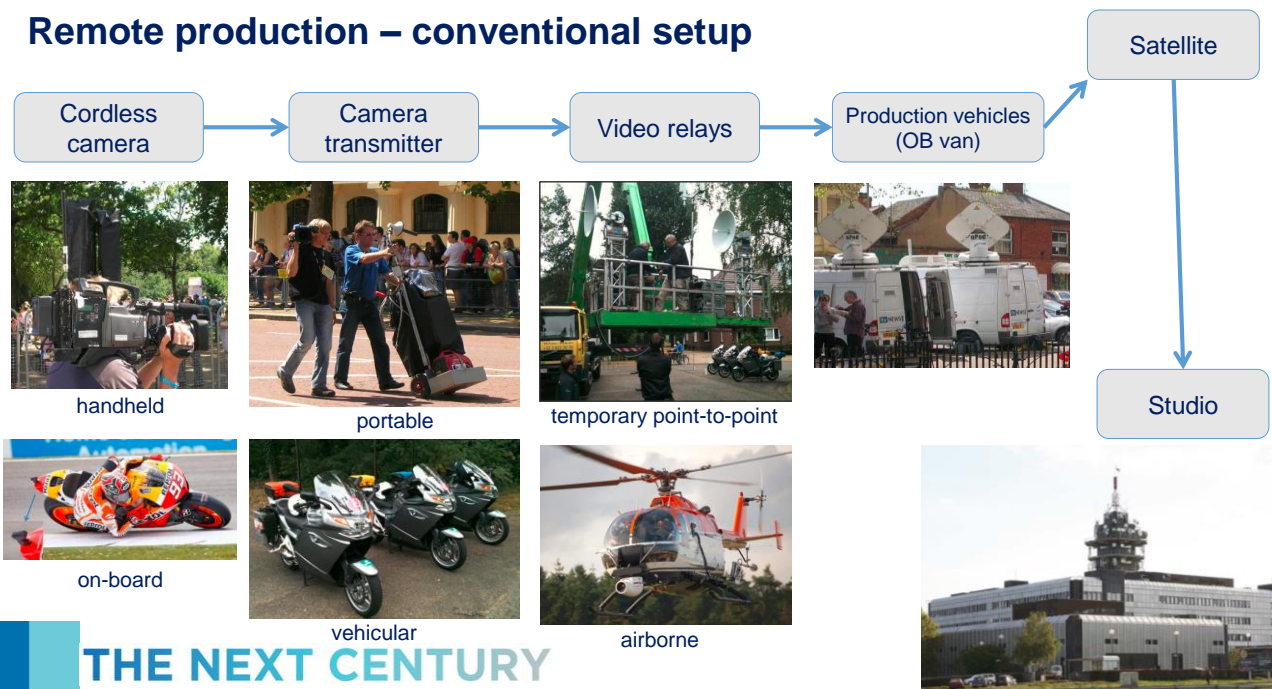

- **4G/LTE is already widely used for news gathering**
- **Content production is complex and expensive**
  - stringent technical and operational requirements
  - currently requires specialised equipment (hardware and software)
- **5G performance targets are attractive**
  - low latency
  - very high throughput
  - high reliability
  - guaranteed bandwidth
  - standard interfaces
- **5G could enable**
  - increased operational flexibility and efficiency
  - new use cases that currently are not possible
  - cost reduction

THE NEXT CENTURY

## Key requirements in content production

### 5G should provide

- Sufficiently high throughput
- Low latency
- Low packet loss
- High-accuracy synchronisation
- Guaranteed QoS
- Bookable, short set-up time
- Control over connectivity
- Standard interfaces
- Functionality on device
- Local comms, device-to-device
- Redundancy
- Lower cost than the alternatives

*Will 5G be able to meet these requirements?*

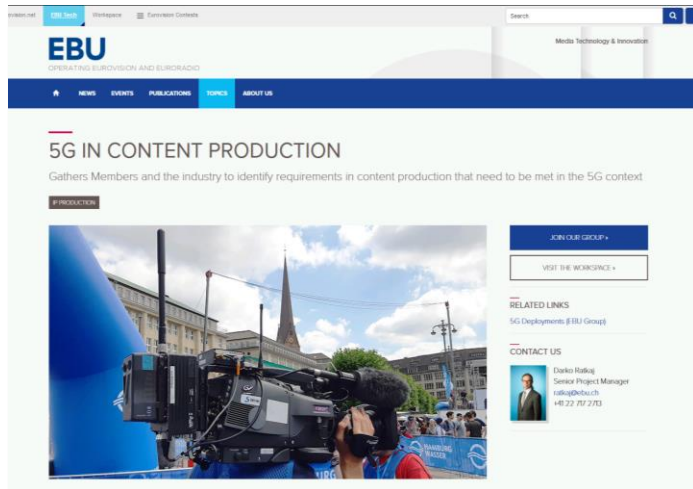

### Many open questions

- Security
- Contention
- Latency
- Coverage
- Reliability
- Network ownership
- Access to backhaul
- Power consumption
- ...

THE NEXT CENTURY

## EBU project group on 5G in Content Production

<https://tech.ebu.ch/groups/5gcp>

- Open to EBU Members and external participants
- Main tasks:
  - Define use cases for 5G in content production and contribution
  - Define technical and operational requirements for 5G in content production and distribution
  - Submit the use cases and requirements to the 3GPP study on *Audio-Visual Service Production (AV\_PROD)*
  - Disseminate information to EBU Members

THE NEXT CENTURY

31

## 3GPP study on audio-visual service production (AV\_PROD)

Conducted in the 3GPP Working Group SA1

### *Initial set of use cases submitted in November 2018*

- Single camera Outside Broadcast uncompressed contribution (S1-183059)
- Single camera Outside Broadcast compressed contribution (S1-183060)
- Professional TV Production Contribution from a Multi-Camera Outside Broadcast using Uncompressed Video (S1-183061)
- Simple Live Sports Commentary (S1-183062)
- Non-public 5G network deployment (S1-183063)
- Audio Streaming in Professional Live Performances (S1-183172)
- Live production with integrated audience services (S1-183173)
- Intercom system for large live events (S1-183174)

***The results of the study will be published in March 2019 in TR22.827***

# 5G in content distribution

THE NEXT CENTURY

© 2018 by the Society of Motion Picture & Television Engineers®, Inc. (SMPTE®)

## Many kinds of audiovisual media content and services

THE NEXT CENTURY

© 2018 by the Society of Motion Picture & Television Engineers®, Inc. (SMPTE®)

Devices, devices...

THE NEXT CENTURY

© 2018 by the Society of Motion Picture & Television Engineers®, Inc. (SMPTE®)

The user context

© 2018 by the Society of Motion Picture & Television Engineers®, Inc. (SMPTE®)

## The distribution challenge

The goal: ***Delivery of the whole range of content and services***

- to all interested users
- at the right time
- at the right place
- on the right device
- with the desired quality
- for the right price

### ***Balancing act between***

- Optimising the user experience
- Resource management
- Business objectives
- Regulatory requirements and constraints

### **Public broadcasters are subject to additional regulatory requirements:**

- Universal availability (on all relevant platforms, everywhere, different user devices)
- Free to view / listen (no recurring charges for access to services)
- The ability to reach the population in emergency situations
- Regulated business models

THE NEXT CENTURY

© 2018 by the Society of Motion Picture & Television Engineers®, Inc. (SMPTE®)

## The user experience

### **Content choice**

### **Quality**

- 'Better pixels'
  - UHD (higher resolution)
  - WCG (more colours)
  - High dynamic range
  - High frame rate
  - High quality audio
- Devices
  - Screen quality
  - Battery life
- Networks
  - Coverage
  - Capacity
  - Latency
  - Reliability
  - Security

### **Convenience**

- Any time
- Anywhere
- On any device
- Ease of access
- User interface
  - Service discovery
  - Navigation
  - Selection
- Personalised
- Trusted services

### **Costs**

- Cost of
  - Device
  - Service
  - Access

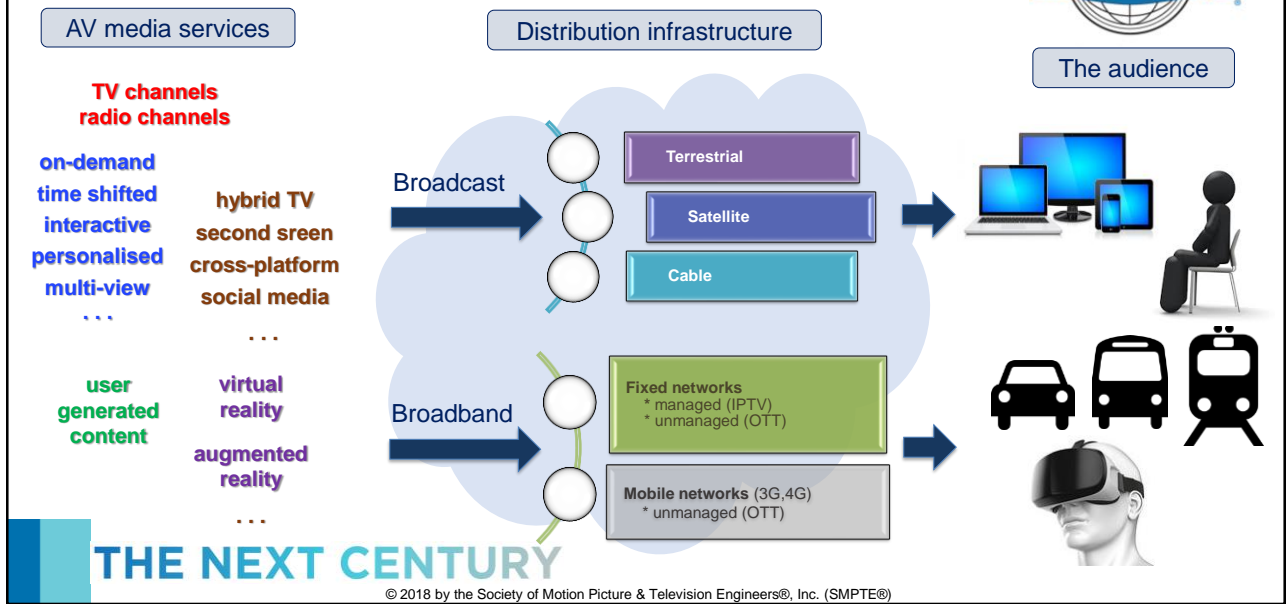

THE NEXT CENTURY

## Distribution options

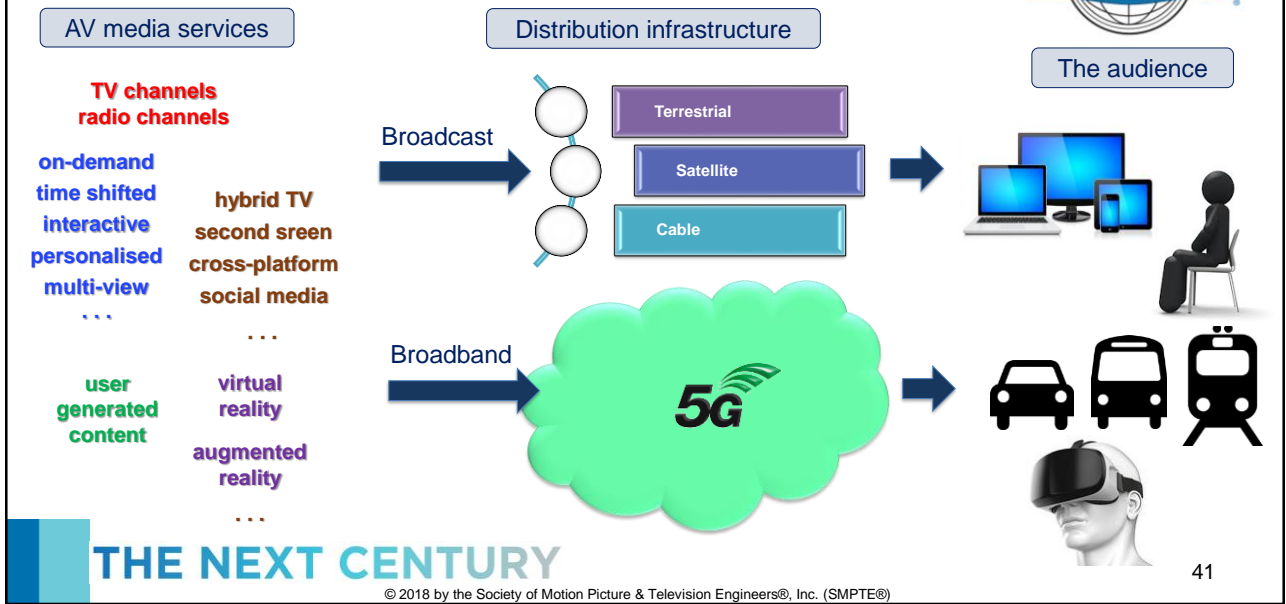

## The role of 5G in media distribution – the initial scenario?

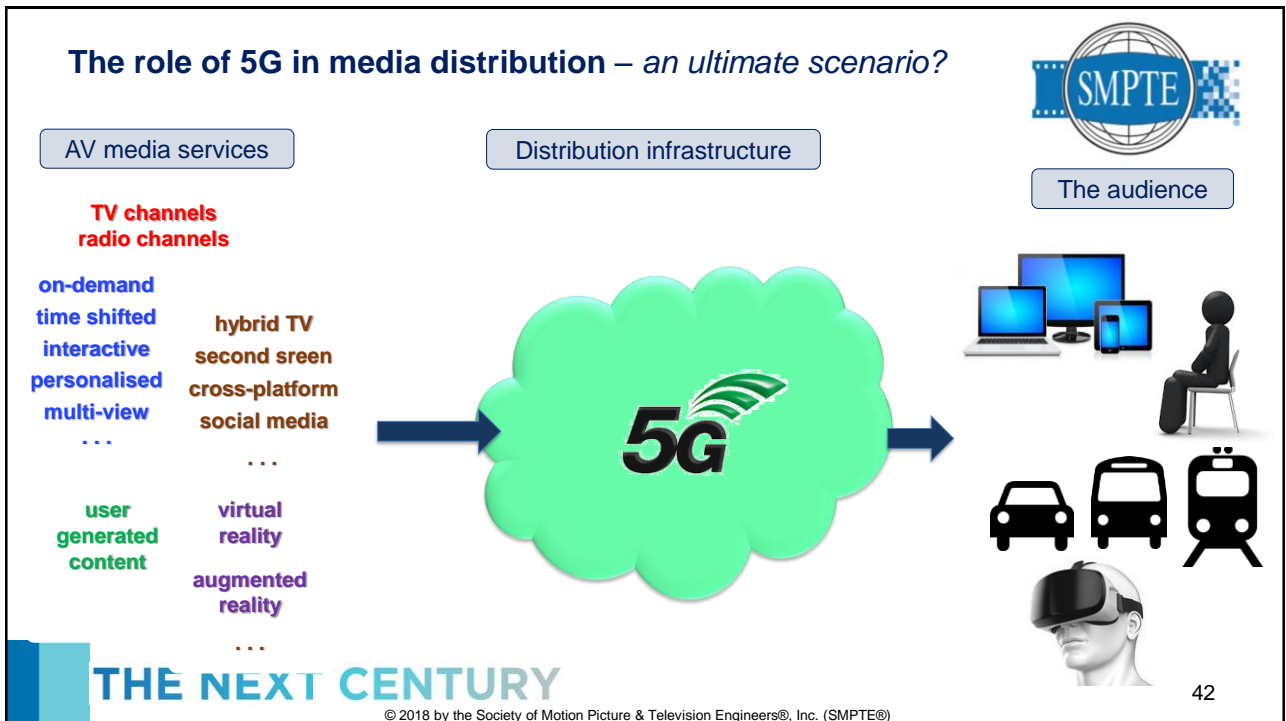

## The role of 5G in media distribution – a probable scenario?

## The role of 5G in media distribution – an ultimate scenario?

## 3GPP standardisation

- Release 15 mostly complete (*final specifications in Q1/2019*)
- Scope and timeline of Release 16 agreed (*due in Q1 / 2020*)
- As of Release 15 all 3GPP technologies are labelled **5G**
  - This is also the first release to include 5G New Radio (5G NR), alongside LTE
- Two parallel strands of development: LTE and 5G NR
  - LTE:
    - Includes both *unicast* and *eMBMS* (*evolved Multimedia Broadcast Multicast Services*)
    - Enhancements to eMBMS in Release 14 (Q3/2017)
    - The work continues with 'Study on LTE-based 5G Terrestrial Broadcast'
      - Report due in March 2019. To be followed by normative work.
  - 5G NR:
    - Terrestrial networks
    - Non-terrestrial (satellite networks)
    - Only unicast (at least until and including Release 16)
      - 5G NR based broadcast and unicast might be included in future releases

Horizon 2020 Project

## Broadcast and Multicast Communication Enablers for the Fifth-Generation of Wireless Systems

SINCE 1916

- **Objectives:**

1. Develop broadcast and multicast point-to-multipoint capabilities for 5G considering M&E, automotive, IoT, and PWS use cases, and evaluate spectrum options for 5G broadcast network deployments.
2. Design a dynamically adaptable 5G network architecture with layer-independent network interfaces to dynamically and seamlessly switch between unicast, multicast, and broadcast modes or use them in parallel and exploit built-in caching capabilities.
3. Experimentally demonstrate the 5G key innovations developed in the project.

- **18 project partners** including telecom operators and equipment vendors, broadcasters, R&D organisations, SMEs, and academia. Globally representative Advisory Board.

- Builds on the state-of-the-art mobile and fixed broadband, and broadcast technologies

- Synergies between M&E, Public Warning Systems, Automotive, and IoT applications.

SINCE 1916

## *5G opportunities for broadcasters*

THE NEXT CENTURY

© 2018 by the Society of Motion Picture & Television Engineers®, Inc. (SMPTE®)

## How can 5G be successfully deployed

- Most of 5G development to date was on technical features (data rates, latency, capacity, mobility, user density, ...)
- Efforts are being made to gather the requirements from the potential industrial users (the 'verticals')
- A number of 'non-technical' issues are yet to be addressed
  - How to achieve large network coverage?
  - Network ownership (e.g. public vs. private networks, neutral host model)
  - Suitable business models and the role of network slicing
  - Role of 5G network operators in vertical use cases
  - Regulatory conditions
  - Costs
  - Time frame for network build out
  - Priorities for future developments

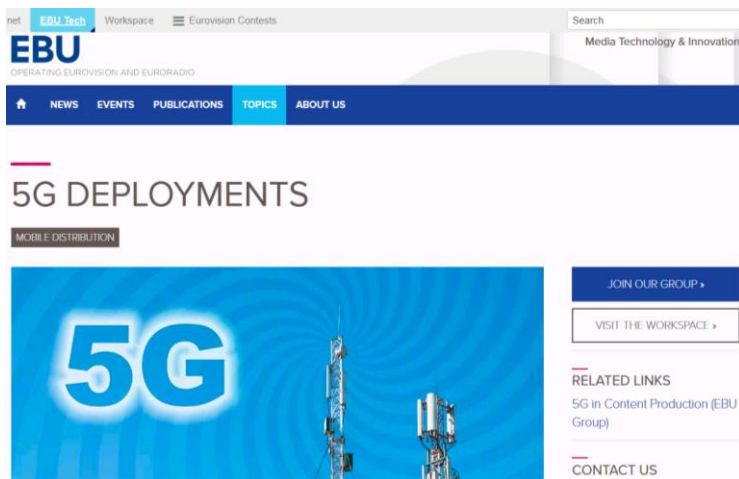

*Where are these issues being discussed?*

THE NEXT CENTURY

53

## EBU project group on 5G Deployments

<https://tech.ebu.ch/groups/5gdeployments>

To study 5G network deployment aspects, such as

- Network slicing
- Private vs public 5G network
- 5G deployment on non-cellular infrastructure (HPHT, satellite)
- Complementary use of cellular and non-cellular 5G networks
- Business arrangements
- Regulatory aspects
- Time line

Open to EBU Members and external participants

THE NEXT CENTURY

© 2018 by the Society of Motion Picture & Television Engineers®, Inc. (SMPTE®)

54

## How can the media sector benefit from 5G

- **Improved technical performance at the level of network infrastructure**
  - At the system level both 4G and 5G might be able to meet the requirements
  - Network performance, coverage, and availability are currently not guaranteed
- **Operational benefits**
  - New functionalities
  - Increased efficiencies
  - Support for best practices and industry standards
  - Unconstrained access to the audience and audience data
- **Strategic perspective**
  - Sustainability and scale
  - Service-driven development with a long-term perspective
  - Interoperability of cellular and other network infrastructures, including broadcast and satellite
  - Innovative business models
  - Appropriate regulatory environment
